

MuleSoft Health Check

Rapid assessment of your MuleSoft integration platform and applications to improve performance, governance, and scalability.

Like every technology platform, integration platforms don't stay static for long. As they grow organically, technical debt accumulates, governance drifts, and operational risks begin to surface. Without a clear benchmark for best practice, internal teams are left guessing.

Common MuleSoft risks we see

1. Inconsistent or low-quality API specifications, DevOps and security not aligned to best practices
2. API implementations not aligned to API-led architecture, limiting reuse
3. Unsupported runtime versions
4. Little to no automated testing (MUnit)
5. Sensitive data stored in plain text instead of secure vaults
6. Inconsistent API documentation and Exchange assets
7. Deployments not aligned to business criticality (e.g. HA, batch)
8. Inefficient design leading to license overages and waste, costing the business thousands of dollars

Adaptiv's Approach

Adaptiv's MuleSoft Health Check removes these risks and uncertainty. Delivered by experienced MuleSoft specialists, we provide an independent, comprehensive assessment of your platform, identify issues, create a remediation plan, provide advice on optimising costs, and improve return on investment.

With **Adaptiv's MuleSoft Health Check**, you'll gain confidence knowing your platform is secure, scalable, cost-efficient, and aligned with proven best practices.

Adaptiv's MuleSoft Health Check takes a focused review of your integration platform across architecture, governance, DevOps practices, security, and operational readiness. Working closely with your teams, we apply proven MuleSoft best practices, including C4E principles, combined with insights from real customer engagements across Australia and New Zealand and over 30 years of collective consultant experience.

What we assess?

Platform Specific

- ▶ Integration Architecture - alignment with API-led architecture and reusable integration patterns
- ▶ MuleSoft Platform Configuration - environments, access management, and runtime configuration
- ▶ DevOps, CI/CD and Work Practices - pipeline maturity, deployment processes, branching strategy and source control practices
- ▶ Support Operating Model - Monitoring, performance, observability and support capability
- ▶ Licensing - Subscription / Consumption Review
- ▶ Documentation Quality - Solution and Network Architecture

Application Specific

- ▶ API Management and Governance - API specifications and security policies
- ▶ Application-level Documentation
- ▶ Code Quality - testing strategy, MUnit coverage, and coding standards
- ▶ Runtime versions and connector compatibility
- ▶ Operational Monitoring - logging and alerts
- ▶ Security & Compliance - credential management and API authentication policies
- ▶ Performance & Scalability - runtime configuration and high-availability practices

AT A GLANCE

Assessment Scope	Hours	Cost (AUD)
Platform plus 3 applications	40	\$10,000
Platform plus 6 applications	80	\$20,000
Platform plus applications agreed in scope	TBD	TBD

Deliverables:

- ▶ Current State Assessment Report
- ▶ Prioritised Findings & Recommendations
- ▶ Integration Platform & Application Remediation Plan

The 4 steps to success

Our MuleSoft architects combine deep platform expertise with practical delivery experience to ensure recommendations are pragmatic, implementable, and aligned with your organisation's integration strategy. We follow a structured and collaborative approach in our assessment: 4 steps to take you from review to remediation plan.

Adaptiv provides world-class integration, consulting and execution, and data and analytics services.

Our expertise has helped some of the largest multinational enterprises across Australia & New Zealand seamlessly transition to cloud platforms, delivering clear and measurable value to their bottom line.
